

**The more you know,
the less gold glows.**

Producing 1 gold ring creates 20 tons of waste.

Gold mining pollutes water and land with mercury and cyanide, endangering the health of people and ecosystems.

Half the gold produced between 1995 and 2015 has or will come from indigenous peoples' lands. Gold mining displaces communities, destroys traditional livelihoods and threatens nature preserves all over the world. Your help is urgently needed to change harmful mining practices and ensure that jewelry, watches, electronics, and

high-tech products don't contain gold mined at the expense of people and the environment.

Use your consumer power! Sign the pledge and demand an end to irresponsible gold mining practices!

The More You Know, The Less Gold Glows!

Join the No Dirty Gold campaign.

I support the **No Dirty Gold** campaign to end destructive gold mining practices. I call on retailers and manufacturers of gold jewelry, electronics, and other goods to work to ensure that the gold in their products was not produced at the expense of local communities, workers, and the environment. I demand that the global mining industry provide retailers and consumers an alternative to dirty gold.
